

Database developer

Localisation: South Dublin

Salary: Negotiable

Our client is looking for a professional database developer with 4+ years experience with strong programming skills and experience working with large and complex databases to join their team based in South Dublin. You will have strong SQL, ETL, design and implementation skills. The successful candidate will be responsible for the development and administration of the database aspects of the suite of products and will also liaise with customers and facilitate interaction between the company and the customer's technical staff.

Database developer role:

- The role covers the full database development cycle, including systems analysis, functional scoping, technical specifications and design and testing.
- Design and implementation of robust, scalable and efficient database systems.
- Design and development of ETL processes for database and data warehouse processing
- Performance tuning and query optimisation of existing applications and databases.
- Perform ad-hoc requests for data manipulations/maintenance, imports, exports, and updates.

Required Skills:

- Minimum 4+ years post qualification development experience with SQL Server with proven experience of all aspects of the development life cycle on enterprise scale systems or similar jobs.
- Excellent knowledge of SQL Server 2005, 2008 and SQL Server Integration Services (SSIS).
- Experience in the development and maintenance of large data warehouses.
- Experience with DBA activities including backups, data sizing and hardware requirements
- Excellent analytical and problem solving skills, ability to understand complex problems and to generate appropriate technical solutions.
- Demonstrable experience in the design, development and optimisation of large real-time databases.

Desirable skills:

- Experience with building OLAP Cubes with SQL Server Analysis Services SSAS
